### 7.1.3

1.	Solid Waste Management	Yes
2.	Liquid Waste Management	Yes
3.	Biomedical Waste Management	No
4.	E-waste Management	Yes

### Waste Management

The method an organization employs to dispose of, reduce, reuse, and prevent trash is known as a waste management system. The ecosystem is protected from the hazardous effects of inorganic and biodegradable elements found in the trash, which makes it crucial. Air pollution, soil erosion, and water poisoning can all result from improper waste management. Our college uses a few methods as an effective tools to move towards waste control.

**Solid Waste Management:** The college has a reliable procedure in place for managing solid waste. Dustbins can be found in a number of locations, including the girl's lawn, the hallways, next to the labs, etc. Teachers and children alike are urged to place trash in trash cans. Every day, sweepers sort and dispose of waste from all academic buildings, labs, and environs. It is recommended that offices go paperless; single-sided used paper is utilized again for writing and printing. All of the solid trash, including the fallen leaves, is buried in a trench that has been dug in an open area, benefiting the soil's fertility.

**Liquid Waste Management:** Institutions properly manage liquid waste as well. All liquid waste generated by college students is channeled through restrooms and labs before being disposed of in sewage systems. The lab assistants completely dilute all hazardous liquid waste before disposing of it in the sewage tank.

**E-Waste Management:** The college has implemented a suitable method for getting rid of all E-waste. To identify the many inoperable items included in this garbage, a committee is formed. Students decorate college fests and other events with computer lab debris, such as CDs. All electronic waste is transported by rickshaw and dumped into a pit that has been dug close to a playground.
